Technical Skills

- **Languages** : JavaScript, Python, Java, C++
- **Backend & Web** : Next.js, React, Express, Flask, Django, REST APIs
- **AI & Agents** : LangGraph, LiveKit, RAG, LLMs, N8N, Mastra
- **Databases & Cache** : PostgreSQL, MongoDB, MySQL, Redis
- **Tools & Cloud** : AWS, Azure, Docker, Git, Prisma, Terraform, Upstash, Postman

Education

Bennett University — B.Tech CSE (CGPA: 8.5/10) Sept 2023 – June 2027

Lucknow Public School & Seth MR Jaipuria School — 10th (98%), 12th (83%) 2010 – June 2023

Experience

Tago [🔗](#) — *Founding Engineer* May 2025

- Led **0→1 full-stack product development**, scaling the platform to **100+ users** using **Next.js** and **AWS infrastructure**.
- Optimized deployment architecture and hosting strategy, reducing operational costs to **near-zero** while maintaining scalability and performance.

Vitalis Capital [🔗](#) — *Contract* Feb 2025

- Built and deployed a **production-grade platform** for a financial services startup which invests into local firms using **Next.js**, **Tailwind CSS**, Docker and AWS.

Google Developer Groups [🔗](#) Sept 2024 – May 2025

- Developed and deployed **full-stack platforms** using **React**, **Supabase**, **Firebase** for GDG BU and FS club.

Projects

Sash [🔗](#) github.com/sept1st2c/sash

- Built a **multi-tenant Auth-as-a-Service platform** with **2FA**, scalable authentication, SDK integration, and API-key based access using **Next.js**, **PostgreSQL**, and **Redis**.
- Used **Redis** for session management, rate limiting, and OTP handling, enabling **real-time session control** and attack protection.
- Designed **webhook-driven architecture** for synchronization across external systems.
- **Technologies and Tools** : Next.js, Node.js, PostgreSQL, Redis (Upstash), SDK Development, Vercel

Volna Code [🔗](#) github.com/sept1st2c/Volna

- Built a **real-time voice AI DSA tutor** using **LiveKit**, **Chat gpt** (STT + LLM), and **Deepgram** (TTS), achieving **sub-2s** end-to-end voice response latency.
- Designed a **stateful LangGraph agent** with a **Socratic hint system** that adapts to student progress across a library of **numerous leetcode problems**.
- Integrated the **Monaco editor** with live code execution in a **sandboxed Python runtime (Piston API)**, enabling real-time code review during an active voice session.
- Engineered a **bidirectional browser↔agent** layer over LiveKit's **WebRTC data channel** to stream code snapshots mid-conversation without disrupting the voice pipeline.
- **Technologies and Tools** : LiveKit (WebRTC), LangGraph, Groq, Deepgram, Monaco, Next.js, Python

Dark Pattern Detector [🔗](#) github.com/sept1st2c/SakV

- Built a **browser extension** to detect and highlight **manipulative UI elements** on e-commerce websites, improving transparency in online interactions.
- **Technologies and Tools** : JavaScript (Scraping), Flask, Naïve Bayes Algorithm, Next.js

Achievements

- **LeetCode**: 1830+ rating with 400+ problems solved
- **Hackathons**: Winner — Hackacino (2025), 2nd — Code Dust (2025), 4th — Smart India Hackathon, BU (2024)
- **Tech Head** @ Google Developers Group, BU & Full Stack Club, BU
