Technical Skills

- **Languages** : TypeScript, JavaScript, Python, Java, C++
- **Backend & Web** : Next.js, React, Express, Flask, Django, REST APIs
- **AI & Agents** : LangGraph, LiveKit, RAG, LLMs, Mastra
- **Databases & Cache** : PostgreSQL, MongoDB, MySQL, Redis (BullMQ)
- **Tools & Cloud** : AWS, Azure, Docker, Git, Prisma, Terraform, Upstash, Postman

Education

Bennett University — B.Tech CSE (CGPA: 8.5/10) Sept 2023 – June 2027
Lucknow Public School & Seth MR Jaipuria School — 10th (98%), 12th (83%) 2010 – June 2023

Experience

RecMaf [↗](#) — SDE Intern July 2026 – Present

- Own the **candidate sourcing service** on an AI hiring platform with **2K+ profiles** and **10+ expert reviewers**, serving clients including **Tata 1mg** and **Asian Paints**.
- Wrote one **adapter contract** every source implements, so adding LinkedIn, GitHub or a job board is a new file and no downstream change. **3 sources** live.
- Vendor pulls land raw and immutable, then collapse into **one record per person** with **field-level provenance** for every claim on a candidate.
- Screening runs on **BullMQ workers backed by Redis**, keyed for **idempotency** and cached on a profile hash, so retries never repeat an LLM call (~**20%** fewer calls).

Tago [↗](#) — Founding Engineer May 2025 - August 2025

- Shipped an **NFC card product** from zero to **100+ users** on **Next.js** and **AWS** as the only engineer.
- Cut recurring infrastructure cost to **near zero** and one of the only engineers who knew the stack e2e.

Vitalis Capital [↗](#) — Contract Feb 2025 - April 2025

- Built the **production platform** for a financial services firm solo, on **Next.js**, **Tailwind**, **Docker** and **AWS**.

Projects

Sash [↗](#) github.com/sept1st2c/sash

- **Multi-tenant Auth-as-a-Service** with **2FA**, API-key access and a published **SDK**, so a tenant ships login without writing auth logic.
- **Redis** holds sessions, OTPs and rate limits, which makes revocation instant and brute force expensive.
- **Webhook-driven sync** pushes auth state to tenant systems with retries, so an outage delays delivery instead of dropping it.
- **Technologies and Tools** : Next.js, Node.js, PostgreSQL, Redis (Upstash), SDK Development, Vercel

Volna Code [↗](#) github.com/sept1st2c/Volna

- **Real-time voice AI DSA tutor** on **LiveKit (WebRTC)**, holding **sub-2s** speech-to-speech latency across a streaming **STT** → **LLM** → **TTS** pipeline.
- Stateful **LangGraph agent** runs a **Socratic hint system** that tracks where each student is stuck instead of resetting every turn.
- **Monaco editor** wired to a **sandboxed Piston runtime**, so the agent reads and runs live code mid-session over LiveKit's **data channel**.
- **Technologies and Tools** : LiveKit (WebRTC), LangGraph, Groq, Deepgram, Monaco, Next.js, Python

Achievements

- **LeetCode**: 1830+ rating with 400+ problems solved
- **Hackathons**: Winner — Hackacino (2025), 2nd — Code Dust (2025), 4th — Smart India Hackathon, BU (2024)
- **Tech Head @ Google Developers Group**, BU & Full Stack Club, BU
